

APPENDIX 6 - MEMBER CASE TABLES PER OUTCOME GROUP (FROM CHAPTER 4)

Types of Democratic Practices

Category 1: Democratic Practices - Decentralized Organizational Governance

Table 1 DP Member Cases - DOG

Case	Specific Outcome Produced
CoopCycle	Federated structure balancing efficiency with participatory governance
DAIR (Distributed AI Research Institute)	Researcher autonomy with distributed decision-making structure
Detroit Community Technology Project (CTC)	Community-driven collaborative decision-making mechanisms
Enspiral	Self-managed collaborative structure distributing authority
Guifi.net	Local community control over infrastructure development within shared frameworks
Loomio	Non-hierarchical cooperative governance with distributed coordination
Loomio	Rotating coordination roles with deliberation-based collective decision-making
Nea Guinea/Tzoumakers	Participatory maker space enabling community members to co-design sustainability solutions
Participatory Brazil	Participatory policy development distributing governance authority
Sensorica	Distributed decision-making with transparent contribution tracking enabling global peer production
The Drivers Cooperative	Democratic governance with transparent pricing and peer-led processes

Category 2: Democratic Practices - Community Data Sovereignty and Control

Table 2 DP Member Cases - CDSC

Case	Specific Outcome Produced
DECODE	Citizen-controlled data governance integrated with municipal democracy
First Nations Information Governance Centre (FNIGC)	First Nations sovereignty over their data with community-controlled governance

First Nations Information Governance Centre (FNIGC)	First Nations-controlled data governance and Indigenous-led data repositories
Global Indigenous Data Alliance (GIDA)	CARE Principles framework prioritizing Indigenous governance over data
Global Indigenous Data Alliance (GIDA)	Indigenous collective authority over data governance independent of state control
MAIAM NAYRI WINGARA	Aboriginal and Torres Strait Islander data governance centering Indigenous agency
Matrix	User sovereignty over personal data and communication infrastructure
MiData	Citizen-controlled health data storage with explicit consent management
MiData	Citizen-controlled health data with privacy-preserving architecture
OpenSAFELY	Privacy-preserving research architecture maintaining public accountability
Worker Algorithm Observatory (WAO)	Worker-controlled tools exposing algorithmic manipulation of wages and jobs

All outcomes establish community / citizen / Indigenous authority over data. The contexts vary: Indigenous data sovereignty (FNIGC, GIDA, MAIAM NAYRI WINGARA), citizen health data (MiData, OpenSAFELY), worker data (WAO), municipal data (DECODE), and personal communications (Matrix). The mechanism is consistent, shifting data governance authority to data subjects. This addresses a core dimension of digital sovereignty.

Category 3: Democratic Practices - Community-Controlled Infrastructure

Table 3 DP Member Cases - CCI

Case	Specific Outcome Produced
Detroit Community Technology Project (CTC)	Community-controlled digital communications and neighborhood-owned digital infrastructure
Guifi.net	Comprehensive community-owned telecommunications serving underserved regions
SOLshare	Community energy sharing infrastructure maximizing solar utilization

Telecomunicaciones Indígenas Comunitarias (TIC A.C.)	Community-owned telecommunications infrastructure reflecting indigenous values
Zenzeleni	Community-owned telecommunications significantly reducing connectivity costs

All outcomes establish community control over infrastructure. These represent material foundations for democratic practice. Without control over essential infrastructure, democratic governance remains abstract. The infrastructure spans telecommunications (Detroit CTC, Guifi.net, TIC A.C., Zenzeleni) and energy (SOLshare).

Category 4: Democratic Practices - Inclusive Participation and Representation

Table 4 DP Member Cases - IPR

Case	Specific Outcome Produced
CLEAR (Civic Laboratory for Environmental Action Research)	Citational politics centering marginalized knowledge systems
Digital Empowerment Foundation	Active leadership roles for marginalized groups in technology governance
Les Mercedes	Inclusive employment opportunities with democratic workplace policies supporting gender equity
Masakhane	Productive integration of technical expertise with community linguistic knowledge
Participatory Brazil	Democratized policy development with broad citizen input
Stop LAPD Spying Coalition	Directly-affected community leadership in anti-surveillance movement

All outcomes create pathways for marginalized voices to participate in or lead governance. This addresses inclusion as a precondition for democracy; formal democratic structures are insufficient without inclusive participation. The specific forms include

centering marginalized knowledge (CLEAR), leadership development (DEF, Stop LAPD), and gender equity (Les Mercedes).

Category 5: Democratic Practices - Open Access and Transparent Systems

Table 5 DP Member Cases - OATS

Case	Specific Outcome Produced
Linux Foundation	Open collaborative development with transparent decision-making
Linux Foundation	Essential software remaining accessible, secure, and community-driven
Loomio	Asynchronous participation enabling inclusive decision-making
Matrix	Community control over communication infrastructure within federated networks
Open Mobility Foundation	Public technical development with transparent decision-making processes
OpenStreetMap	Open mapping commons accessible to all users globally
OpenStreetMap	Volunteer-based operations enabling minimal overhead and accessible mapping
Participatory Brazil	Online consultation platform enabling citizen proposal submission and voting
The Drivers Cooperative	Modified transparency approach respecting privacy while enabling accountability

All outcomes focus on open, transparent systems. Transparency and accessibility are preconditions for democratic participation; without them, governance cannot be meaningfully democratic. The specific forms include open development (Linux Foundation), accessible platforms (Loomio, Participatory Brazil, OpenStreetMap), and transparent processes (Open Mobility Foundation, The Drivers Cooperative).

Category 6: Democratic Practices - Indigenous and Cultural Governance Integration

Table 6 DP Member Cases - ICGI

Case	Specific Outcome Produced
First Nations Information Governance Centre (FNIGC)	Data governance reflecting First Nations cultural values and relationships
Global Indigenous Data Alliance (GIDA)	Global framework for Indigenous data governance reflecting collective Indigenous values
Te Hiku Media	Māori cultural governance embedded in AI and digital archive management
Te Mana Raraunga	Culturally grounded governance reflecting Indigenous values and protocols
Te Mana Raraunga	Māori data governance aligned with cultural values and sovereignty principles

All outcomes integrate Indigenous governance frameworks. This represents a distinct form of democratic practice, grounded in Indigenous values rather than Western democratic models. The outcomes demonstrate that "democratic" can mean culturally-specific forms of collective governance.

Category 7: Democratic Practices - Legal and Institutional Protection

Table 7 DP Member Cases - LIP

Case	Specific Outcome Produced
CoopCycle	Legal protection ensuring technology serves cooperative movement
First Nations Information Governance Centre (FNIGC)	Strategic partnerships advancing First Nations data governance while maintaining independence
First Nations Information Governance Centre (FNIGC)	Indigenous nation-to-nation engagement preserving community accountability while influencing policy
Guifi.net	Legal protection maintaining commons-based telecommunications
Solar Commons	Community trusts holding solar assets and distributing benefits locally
Te Hiku Media	Legal framework protecting Māori data sovereignty while enabling beneficial use
Telecomunicaciones Indígenas Comunitarias (TIC A.C.)	Legal victory establishing indigenous telecommunications autonomy alongside functioning infrastructure

All outcomes establish legal or institutional protection for community control. This addresses the sustainability of democratic practices. Without legal protection, community governance is vulnerable to appropriation or dissolution. The specific forms include legal innovation (CoopCycle, Guifi.net, Te Hiku Media, Solar Commons) and strategic institutional engagement (FNIGC, TIC A.C.).

Category 8: Democratic Practices - Resistance and Accountability Mechanisms

Table 8 DP Member Cases - RAM

Case	Specific Outcome Produced
CLEAR (Civic Laboratory for Environmental Action Research)	Integrated approach building alternatives while challenging harmful systems
DAIR (Distributed AI Research Institute)	Small-scale community-driven AI models reducing bias and environmental harm
Stop LAPD Spying Coalition	Shutdown of LAPD Operation LASER and PredPol predictive policing programs
Stop LAPD Spying Coalition	Systemic mapping exposing surveillance technology ecosystems and institutional relationships
Worker Algorithm Observatory (WAO)	Worker-controlled investigation and documentation of algorithmic management
Worker Algorithm Observatory (WAO)	Worker-generated data enabling algorithm analysis and worker rights advocacy
Worker Algorithm Observatory (WAO)	Worker-led algorithmic investigation tools exposing platform manipulation

All outcomes involve challenging harmful systems or creating accountability mechanisms. Democratic practice requires not just internal governance but also the capacity to contest external power. These outcomes demonstrate resistance as a democratic practice: exposing, challenging, and defeating harmful systems.

Category 9: Democratic Practices - Local Capacity and Self-Governance

Table 9 DP Member Cases - LCSG

Case	Specific Outcome Produced
Detroit Community Technology Project (CTC)	Local technical capacity enabling community self-governance of digital resources
Participatory Brazil	Digital-physical integration enabling citizen participation in government policy development
Participatory Brazil	Citizen co-creation of governance through active participation framed as civic responsibility
Zenzeleni	Local technical capacity for independent network maintenance

All outcomes build local capacity for self-governance. This addresses the capacity dimension of sovereignty: democratization of technology requires actual capability, not just formal structures. These outcomes enable communities to govern themselves.

Forms of Community Value

Category 1: Community Value - Worker and Member Economic Benefits

Table 10 CV Member Cases - WMEB

Case	Specific Outcome Produced
CoopCycle	Worker-owned alternative to exploitative platform labor models
CoopCycle	Worker-retained value through cooperative ownership
Fairbnb.coop	Community-selected projects funded through platform commission redistribution
Fairbnb.coop	Tourism revenues redistributed to local community priorities
Groupmuse	Cooperative structure retaining cultural value within community
Les Mercedes	Cooperative structure providing fair wages and social protections
MiData	Cooperative data governance retaining benefits within member communities
Namma Yatri	Worker ownership with full earnings retention and transparent algorithmic management
Som Energia	Cooperative renewable energy keeping benefits within member community
The Drivers Cooperative	Driver-members earning 8-10% more per trip with democratic participation
Zenzeleni	Local economic circulation and community-controlled reinvestment

Category 2: Community Value - Open Knowledge and Technology Commons

Table 11 CV Member Cases - OKTC

Case	Specific Outcome Produced
DECODE	Open-source data sovereignty tools enabling community governance
Linux Foundation	Collaborative governance ensuring public access to foundational technology
Linux Foundation	Diversified revenue streams maintaining organizational independence
Loomio	Free and open tools for democratic deliberation accessible to all
Matrix	Open protocol enabling community control over communications infrastructure
OpenStreetMap	Free geographic data enabling countless local initiatives globally
P2P Foundation	Community-maintained global mapping database with multiple participation pathways
P2P Foundation	Comprehensive commons ecosystem spanning software, culture, and science
Research Data Alliance	Flexible standards framework accommodating diverse research contexts
Sensorica	Open collaborative research enabling distributed innovation
WikiHouse	Open-source construction enabling local fabrication and modification
WikiHouse	Freely accessible housing designs enabling local adaptation and production
WikiHouse	Housing knowledge commons accessible for local fabrication

All outcomes create commons: freely accessible resources that generate community value through availability rather than enclosure. The specific forms include open-source tools (DECODE, Loomio, Matrix, WikiHouse), open data (OpenStreetMap), and knowledge commons (P2P Foundation, Research Data Alliance, Sensorica).

Category 3: Community Value - Community Infrastructure and Capacity Assets

Table 12 CV Member Cases - CICA

Case	Specific Outcome Produced
Australian Research Data Commons	Diversified funding enabling long-term sustainability of national research data assets

Detroit Community Technology Project (CTC)	Portable community networking enabling rapid deployment of local internet infrastructure
Digital Empowerment Foundation	Community technological capacity building and expanded digital participation
Digital Empowerment Foundation	Village-owned internet infrastructure with local language applications
Digital Empowerment Foundation	Widespread digital and financial literacy with local technological capacities
Guifi.net	40,000+ node commons-based telecommunications network serving rural communities
SOLshare	Real-time peer-to-peer electricity trading network with community energy prosumers
Solar Commons	Solar benefits generating long-term community wealth
Solar Commons	Integrated framework connecting energy outcomes to community transformation

All outcomes create durable community assets: infrastructure (Guifi.net, Detroit CTC, DEF, SOLshare, Solar Commons), capacity (DEF), and data resources (ARDC). These represent capital formation at the community level, generating ongoing value beyond immediate transactions.

Category 4: Community Value - Culturally-Specific Technology and Knowledge

Table 13 CV Member Cases - CSTK

Case	Specific Outcome Produced
Digital Empowerment Foundation	Local technological literacy and production capabilities
Groupmuse	Community music events creating cultural and social value
MAIAM NAYRI WINGARA	Community-centered valuation of data as collective Indigenous asset
Masakhane	Open-access datasets and translation models for African languages
Masakhane	Culturally appropriate technology with both technical performance and community ownership
Monlam AI	Tibetan NLP tools integrated with monastic institutions for text digitization
Te Hiku Media	Cultural sovereignty and linguistic preservation

Te Hiku Media	High-accuracy Māori language transcription system exceeding commercial models
---------------	---

All outcomes create culturally-specific value. This challenges narrow economic definitions of value (relevant to RQ II) by demonstrating that community value includes cultural, linguistic, and social dimensions. The specific forms include language technology (Masakhane, Monlam AI, Te Hiku Media), cultural data valuation (MAIAM NAYRI WINGARA), and cultural events (Groupmuse).

Category 5: Community Value - Alternative Economic Models and Structures

Table 14 CV Member Cases - AEMS

Case	Specific Outcome Produced
CLEAR (Civic Laboratory for Environmental Action Research)	Accessible research tools democratizing scientific inquiry
Enspiral	Participatory resource allocation across networked enterprises
Sensorica	Novel organizational structure enabling commons-based peer production
Worker Algorithm Observatory (WAO)	Hybrid governance combining direct worker involvement with expert analysis

All outcomes create alternative economic structures. These go beyond redistribution to reimagine economic relationships: participatory allocation (Enspiral), peer production (Sensorica), hybrid governance (WAO), and democratized access (CLEAR). This demonstrates community value creation through structural innovations.

Balance: The Art of Navigating Divergent Priorities

Category 1: Balance - Federated Multi-Scale Governance

Table 15 B Member Cases - FMSG

Case	Specific Outcome Produced
Guifi.net	Federated structure combining local autonomy with shared principles
Guifi.net	Bounded flexibility ensuring baseline interoperability with contextual adaptation
Matrix	Federated architecture combining local sovereignty with global interoperability
Matrix	Multi-scale technical architecture accommodating diverse organizational contexts
MiData	Interconnected cooperatives enabling cross-border research while preserving community control over data access
Open Mobility Foundation	City-led mobility governance with interoperable standards
OpenAgriNet	Open agricultural infrastructure serving smallholder farmers
OpenAgriNet	Farmer-controlled agricultural technology with global interoperability
SOLshare	Multi-scale energy infrastructure enabling community-level grid management

Category 2: Balance - Multi-Network Coordination and Solidarity

Table 16 B Member Cases - MNCS

Case	Specific Outcome Produced
Enspiral	Collaborative network amplifying social enterprise impact
Global Indigenous Data Alliance (GIDA)	Transnational Indigenous coordination amplifying collective advocacy
Global Indigenous Data Alliance (GIDA)	Transnational Indigenous solidarity networks supporting local data sovereignty while respecting cultural specificity
Open Mobility Foundation	Network of cities collectively shaping mobility governance
P2P Foundation	Transnational knowledge infrastructure supporting commons movement
Slum Dwellers International	Transnational network amplifying community-driven urban advocacy
Te Mana Raraunga	Transnational Indigenous coordination amplifying Māori advocacy

All outcomes build multi-network presence. This addresses RQ III by demonstrating how initiatives build power through solidarity while maintaining distinct identity.

Category 3: Balance - Bidirectional Knowledge and Resource Exchange

Table 17 B Member Cases - BKRE

Case	Specific Outcome Produced
Australian Research Data Commons	National research data infrastructure enabling cross-institutional collaboration
DECODE	Multi-partner ecosystem enabling citizen-controlled data governance
Digital Empowerment Foundation	Reciprocal knowledge exchange strengthening both local and global initiatives
Masakhane	University partnerships ensuring local community benefits from language technology research
OpenSAFELY	Pro bono institutional support through collaborative partnerships
P2P Foundation	Reciprocal knowledge flows benefiting both global and local communities
Research Data Alliance	Global data sharing infrastructure supporting research commons

All these outcomes establish reciprocal exchange. This addresses RQ III by demonstrating how initiatives navigate partnership dynamics to prevent extraction.

Category 4: Balance - Community Sovereignty Protection in External Engagement

Table 18 B Member Cases - CSPEE

Case	Specific Outcome Produced
Fairbnb.coop	Locally-responsive growth maintaining community partnerships

Les Mercedes	Locally-rooted alternative addressing specific neighborhood needs
Linux Foundation	Balanced engagement leveraging corporate resources while preserving community control
Monlam AI	Technology development aligned with Tibetan cultural values and priorities
Nea Guinea/Tzoumakers	Digital tools integrating traditional agricultural knowledge with modern techniques
Open Mobility Foundation	City-controlled mobility data standards ensuring public oversight of transportation systems
Slum Dwellers International	Community-led development with transnational solidarity support
Te Hiku Media	Independent technology development retaining community control
Telecomunicaciones Indígenas Comunitarias (TIC A.C.)	Community assemblies determining telecommunications priorities through consensus

All outcomes maintain community control in external engagement. This addresses RQ III by demonstrating how initiatives protect community interests in partnerships.

Category 5: Balance - Global-Local Standards Navigation

Table 19 B Member Cases - GLSN

Case	Specific Outcome Produced
Australian Research Data Commons	Multi-scale research data governance supporting varied needs
Australian Research Data Commons	Community-controlled secure data access enabling research while preserving privacy rights
OpenSAFELY	Context-specific privacy standards within global dialogue
OpenStreetMap	Local mapping autonomy within global collaborative commons enabling both universal access and contextual specificity
OpenStreetMap	Shared protocols with community-specific mapping practices
Sensorica	Reduced R&D costs through crowd-sourced innovation while preserving open access to improvements

All outcomes navigate standardization-adaptation tensions. This addresses RQ III by demonstrating how initiatives balance global coordination with local needs.

Studying the Categories of Impact

Category 1: Impact - Policy and Regulatory Change

Table 20 I Member Cases - PRC

Case	Specific Outcome Produced
CLEAR (Civic Laboratory for Environmental Action Research)	Community science informing policy change
First Nations Information Governance Centre (FNIGC)	Policy frameworks recognizing Indigenous data sovereignty at national and international levels
Global Indigenous Data Alliance (GIDA)	Indigenous governance frameworks adopted by international institutions
Matrix	Open protocol shaping interoperable secure communications globally
Open Mobility Foundation	Public governance frameworks for mobility data
Open Mobility Foundation	Regulatory frameworks returning data control to public governance
P2P Foundation	Commons frameworks entering policy discussions globally
Stop LAPD Spying Coalition	Policy victories eliminating specific surveillance programs
Te Mana Raraunga	Formal agreement recognizing Māori data sovereignty in national statistics
Telecomunicaciones Indígenas Comunitarias (TIC A.C.)	Regulatory exemption enabling sustainable community telecommunications
The Drivers Cooperative	Worker-owned platform model informing regulatory reform discussions

Category 2: Impact - Community Capacity Building

Table 21 I Member Cases - CCB

Case	Specific Outcome Produced
DAIR (Distributed AI Research Institute)	Enhanced community capacity to develop contextually appropriate AI
First Nations Information Governance Centre (FNIGC)	Regional capacity for First Nations data sovereignty
Masakhane	Distributed African AI research capacity
Participatory Brazil	Enhanced citizen capacity for effective policy participation
Slum Dwellers International	Community-generated data empowering local advocacy
Stop LAPD Spying Coalition	Community capacity to document, challenge, and defeat surveillance

All outcomes build ongoing capacity. This addresses sustainability: impact that creates capacity for further action enables continued change. The specific capacities include AI development (DAIR, Masakhane), data governance (FNIGC), policy participation (Participatory Brazil), and advocacy (SDI, Stop LAPD).

Category 3: Impact - Cultural and Linguistic Sovereignty

Table 22 I Member Cases - CLS

Case	Specific Outcome Produced
Masakhane	African language technological capacity and research methodology transformation
Masakhane	African language NLP capabilities created through community-driven research
Monlam AI	Tibetan linguistic sovereignty through community-controlled AI development
Monlam AI	Tibetan language technology preserving and revitalizing cultural heritage
Te Hiku Media	World-leading Māori language AI technology advancing cultural revitalization

All outcomes advance cultural / linguistic sovereignty. These represent existential impact, preserving languages and cultures that face erasure. The specific achievements include African language NLP (Masakhane), Tibetan language technology (Monlam AI), and Māori language AI (Te Hiku Media).

Category 4: Impact - Economic Value Transformation

Table 23 I Member Cases - EVT

Case	Specific Outcome Produced
Guifi.net	Local community control over infrastructure development within shared frameworks
Guifi.net	Community-retained value through locally-circulating telecommunications economy
Namma Yatri	Market-engaged alternative demonstrating viable non-extractive model
Namma Yatri	Zero-commission model maximizing driver earnings
The Drivers Cooperative	Transparent worker-controlled platform with fair value distribution

All outcomes transform economic value flows. These demonstrate that alternatives to extraction are viable at scale. The specific transformations include community-retained telecommunications value (Guifi.net), zero-commission platform models (Namma Yatri), and worker-controlled value distribution (The Drivers Cooperative).

Category 5: Impact - Governance and Institutional Transformation

Table 24 I Member Cases - GIT

Case	Specific Outcome Produced
CLEAR (Civic Laboratory for Environmental Action Research)	Community control over research affecting their environments
CoopCycle	Transnational growth with locally-responsive governance
First Nations Information Governance Centre (FNIGC)	Multi-scalar governance maintaining local control while contributing to transnational advocacy
OpenSAFELY	Transparent privacy-preserving research with public accountability
Participatory Brazil	Government platform enabling citizen participation in policy-making
Slum Dwellers International	Resident-led urban development recognized by governments

All outcomes transform governance institutions. These create systemic change in how governance operates: citizen participation (Participatory Brazil), community research control (CLEAR), resident-led development (SDI), and multi-scalar Indigenous governance (FNIGC).

Category 6: Impact - Climate and Ecological Transformation

Table 25 I Member Cases - CET

Case	Specific Outcome Produced
Slum Dwellers International	Community-led climate adaptation integrating housing justice and environmental resilience
SOLshare	Community-controlled energy systems providing climate resilience and economic opportunities
Som Energia	Integrated measurement capturing economic and social dimensions of energy transition

All outcomes address climate / ecological challenges. These demonstrate that community-led initiatives can contribute to climate response while maintaining community benefit and democratic governance.
